More information

Simplicity is the result of good design practice coupled with product and application knowledge and experience.

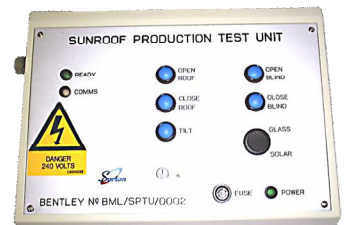

Sorion Assembly Aids are ergonomically designed to survive the harsh environment of the aerospace and automotive manufacturing assembly shop.

The units are custom made and vary in the level of complexity from a simple switch-able power source using industry standard Bosch power tool batteries and charging facilities, to units with integrated electronics and remote wireless communication.

Sorion has evolved with a dynamic team to be proactive in our approach and forward thinkers in our ability to highlight possible pitfalls, all in a bid to increase quality and to reduce delivery times to the customer.

You can rely on **Sorion's** 15 years of experience in designing portable test systems that range from simple push button test boxes to complex microprocessor based systems for use in the automotive manufacturing environment.
